

# Going Active Green with Active Ants

## Our E-fulfilment process

- Our AutoStore stores products more efficiently and requires 600% less storage space than a traditional warehouse.
- The robots that store the products in the framework of the AutoStore are sustainable. 10 of these robots use the same amount of energy as 1 vacuum cleaner and regenerate energy.
- These self-sufficient robots also know when to charge themselves and resume work when recharged to prevent unnecessary use of electricity.
- Our automated packing machines cut and fold the packaging inwards to fit the products perfectly. We don't need to use filling materials, or produce any waste, by packing in this manner.
- Using these packing machines also reduces the amount of excess air in the packaging by 40%.
- We print the shipping label directly on the box, which will save us 8 million shipping labels each year.
- We are, in collaboration with our clients, digitizing all packing slips. Which will save us, in time, 8 million paper packing slips each year.
- Our process is organically certified towards European guidelines. Which means we can offer organic storage, processing and shipping.

Met onze automatische inpakmachines **verminderen** wij de hoeveelheid overtollige **lucht in pakketten met**

## In and around our E-fulfilment centers

- All warehouses are equipped with LED lighting.
- 30% of our fleet consists of electric vehicles.

## With our packaging

- Our packaging is 100% FCS-certified and sustainable.
- If filling material is still required, we use materials made from recyclable paper or plastic.

## For the last-mile

- We offer green last-mile delivery through our partner 'fietskoeriers' (Bike-couriers).
- Because we package 40% less air, our delivery partners also need less cars, vans, or freight trucks for delivery.

## Together, for a greener future

- We know we're not the greenest company, or 100% climate-neutral, but we know our footprint has to be reduced and we will keep on improving our process to make sure we can achieve that. In this initiative, called **Active Green**, we collaborate closely with our clients in order to make every aspect of our business greener.
